Subject index

Acid–base
Acid–base, hydration–dehydration and keto–enol equilibria in aqueous solutions of α-ketoacids: study by spectroscopy, polarography and linear sweep voltammetry (Kozlowski, Zuman) 43
Active metabolites
Electrochemistry of omeprazole, active metabolites and a bound enzyme model. Possible involvement of electron transfer in anti-ulcer action (Ames, Kovacic) 443
Adenosinetriphosphatase
Orientation of membrane fragments containing ($Na^+ + K^+$)-ATPase (Gergely et al.) 149
Adsorptive transfer stripping voltammetry
Adsorptive transfer stripping voltammetry: effect of electrode potential on the structure of DNA adsorbed at the mercury surface (Paleček) 71
Alamethicin
Interaction of alamethicin, melittin and protein kinase C with pure and phospholipid monolayer covered mercury electrode surfaces (Miller et al.) 85
Alcaligenes eutrophus Z-1 hydrogenase
Direct electron transfer between *Alcaligenes eutrophus Z-1* hydrogenase and glassy carbon electrodes (Schlereth et al.) 473
Alzheimer's disease
Electroanalytical characterization of Alzheimer's disease and ovine spongiform encephalopathy by repeated cyclic voltammetry at a capillary graphite paste electrode (Banissi-Sabourdy et al.) 127
Aminobutyric acid
A comparative study of the surface electrochemical oxidation reactions of α-, β-, and γ-aminobutyric acid at platinum (Wylie, Roscoe) 367
Amperometric processes
Amperometric processes with glucose oxidase embedded in the electrode (Sakura, Buck) 387
Anti-ulcer action
Electrochemistry of omeprazole, active metabolites and a bound enzyme model. Possible involvement of electron transfer in anti-ulcer action (Ames, Kovacic) 443
Apomembranes
Electric light scattering study of apomembranes (Taneva et al.) 451
Avidin
Amperometric study of immuno-ion-selective electrode responses using biotin-aza-crown-6 ionophore (Tan, Girault) 459

Bienzyme membrane sensor
An electrochemical bienzyme membrane sensor for free cholesterol (Oliveira Brett et al.) 105
Biochemical oxidation
The biochemical oxidation of D-sorbitol to L-sorbose at constant electric current (Mitov, Beschkov) 435
Bioelectrochemistry
Bioelectrochemistry of microperoxidases (Razumas et al.) 159
Bioenergetics
The double function of oxygen in bioenergetics (Losada) 31
Biological effects
Counter-ion polarization and low frequency, low electric field intensity biological effects (Polk) 279
Bioluminescence
Differential pulse volt bioluminescence of quenched cells of *Lampito mauritii* (Santhanam, Haram) 213

Biomass estimation
On the dielectric properties of cell suspensions at high volume fractions (Davey et al.) 319
Biosensors
Amperometric processes with glucose oxidase embedded in the electrode (Sakura, Buck) 387
Biosystems
The stress-induced electromagnetic emission from biosystems: chemiluminescence response of plants to mechanical and chemical damage (Slawinska et al.) 483
Biotin-aza-crown-6 ionophore
Amperometric study of immuno-ion-selective electrode responses using biotin-aza-crown-6 ionophore (Tan, Girault) 459
Bound enzyme model
Electrochemistry of omeprazole, active metabolites and a bound enzyme model. Possible involvement of electron transfer in anti-ulcer action (Ames, Kovacic) 443

Carbon paste electrode
Preparation and characterization of a fragile enzyme immobilized carbon paste electrode (Amine, Kauffmann) 117
Cell suspensions
On the dielectric properties of cell suspensions at high volume fractions (Davey et al.) 319
Chemiluminescence response
The stress-induced electromagnetic emission from biosystems: chemiluminescence response of plants to mechanical and chemical damage (Slawinska et al.) 483
Chromosomes
Transcription in *Drosophila melanogaster* salivary gland cells is altered following exposure to low frequency electromagnetic fields: analysis of chromosomes 3L and X (Goodman et al.) 311
Cole–Cole equation
On fitting dielectric spectra using artificial neural networks (Kell, Davey) 425
Counter-ion polarization
Counter-ion polarization and low frequency, low electric field intensity biological effects (Polk) 279
Cyanine dye
The fluorescent probe method using cyanine dye to determine the membrane potential in cells (Kakutani et al.) 221
Cytarabine
Differential pulse polarographic determination of the antineoplastic agent cytarabine and its isomer the nucleoside cytidine (Marin, Teijeiro) 417
Cytidine
Differential pulse polarographic determination of the antineoplastic agent cytarabine and its isomer the nucleoside cytidine (Marin, Teijeiro) 417
Cytochrome
Proton transport through the *bc* complex of photosynthetic bacteria and the significance of in-situ potentiometry of midpoint potentials (Naumann) 401
Cytochrome *c*
Kinetic aspects of the interaction of cytochrome *c* with ubiquinol cytochrome *c* reductase in beef heart submitochondrial particles (Fato et al.) 177

Dehydrogenase system
Electrostimulation of the dehydrogenase system of yeast by alternating currents (Zhang, Berg) 341
Desulfovibrio vulgaris
Electrode reaction of the soluble domain of the membrane-bound hydrogenase from *Desulfovibrio vulgaris*, strain Miyazaki F (Sagara et al.) 191
Dielectric spectroscopy
On the dielectric properties of cell suspensions at high volume fractions (Davey et al.) 319
On fitting dielectric spectra using artificial neural networks (Kell, Davey) 425
DNA
Adsorptive transfer stripping voltammetry: effect of electrode potential on the structure of DNA adsorbed at the mercury surface (Paleček) 71
D-Sorbitol
The biochemical oxidation of D-sorbitol to L-sorbose at constant electric current (Mitov, Beschkov) 435

Electric field effects
Temperature dependence of electric field effects on Na,K-ATPase (Blank, Soo) 291
Electrochemical potential
The electrochemical potential revisited (Walz, Caplan) 5

Electrode potential
Adsorptive transfer stripping voltammetry: effect of electrode potential on the structure of DNA adsorbed at the mercury surface (Paleček) 71
Electron transfer
Electron transfer reactions in both the oxidizing and reducing sites of photosystem I. A laser flash absorption spectroscopy study (Hervás et al.) 205
Electrochemistry of omeprazole, active metabolites and a bound enzyme model. Possible involvement of electron transfer in anti-ulcer action (Ames, Kovacic) 443
Electrostimulation
Electrostimulation of the dehydrogenase system of yeast by alternating currents (Zhang, Berg) 341

Fluorescent probe method
The fluorescent probe method using cyanine dye to determine the membrane potential in cells (Kakutani et al.) 221
Free cholesterol
An electrochemical bienzyme membrane sensor for free cholesterol (Oliveira Brett et al.) 105

Gene transfer
Membrane electroporation and direct gene transfer (Neumann) 247
Glassy carbon electrodes
Direct electron transfer between *Alcaligenes eutrophus Z-1* hydrogenase and glassy carbon electrodes (Schlereth et al.) 473
Glucose oxidase
Amperometric processes with glucose oxidase embedded in the electrode (Sakura, Buck) 387
Glutamate dehydrogenase
Preparation and characterization of a fragile enzyme immobilized carbon paste electrode (Amine, Kauffmann) 117
Electrical control of the glutamate dehydrogenase reaction in polypyrrole membranes (Yabuki et al.) 489
Graphite paste electrode
Electroanalytical characterization of Alzheimer's disease and ovine spongiform encephalopathy by repeated cyclic voltammetry at a capillary graphite paste electrode (Banissi-Sabourdy et al.) 127

HL-60 cells
Changes in transcription in HL-60 cells following exposure to alternating currents from electric fields (Blank et al.) 301
Human cultured cells
Electroporation of human cultured cells grown in monolayers. Part 3. Transformed cells and primary cells (Kwee et al.) 269
Hydration–dehydration
Acid–base, hydration–dehydration and keto–enol equilibria in aqueous solutions of α-ketoacids: study by spectroscopy, polarography and linear sweep voltammetry (Kozlowski, Zuman) 43
Hydrogenase
Electrode reaction of the soluble domain of the membrane-bound hydrogenase from *Desulfovibrio vulgaris*, strain Miyazaki F (Sagara et al.) 191

Immobilization
Preparation and characterization of a fragile enzyme immobilized carbon paste electrode (Amine, Kauffmann) 117
Ion-selective responses
Amperometric study of immuno-ion-selective electrode responses using biotin-aza-crown-6 ionophore (Tan, Girault) 459
Isomers
Differential pulse polarographic determination of the antineoplastic agent cytarabine and its isomer the nucleoside cytidine (Marin, Teijeiro) 417

Ketoacids
Acid–base, hydration–dehydration and keto–enol equilibria in aqueous solutions of α-ketoacids: study by spectroscopy, polarography and linear sweep voltammetry (Kozlowski, Zuman) 43
Keto–enol, equilibria
Acid–base, hydration–dehydration and keto–enol equilibria in aqueous solutions of α-ketoacids: study by spectroscopy, polarography and linear sweep voltammetry (Kozlowski, Zuman) 43
Kinetics
Kinetic aspects of the interaction of cytochrome *c* with ubiquinol cytochrome *c* reductase in beef heart submitochondrial particles (Fato et al.) 177

Lampito mauritii
Differential pulse volt bioluminescence of quenched cells of *Lampito mauritii* (Santhanam, Haram) 213
Langevin–Lorentz model
From the Langevin–Lorentz to the Zeeman model of electromagnetic effects on ligand–receptor binding (Bianco, Chiabrera) 355
Laser flash absorption spectroscopy
Electron transfer reactions in both the oxidizing and reducing sites of photosystem I. A laser flash absorption spectroscopy study (Hervás et al.) 205
Ligand–receptor binding
From the Langevin–Lorentz to the Zeeman model of electromagnetic effects on ligand–receptor binding (Bianco, Chiabrera) 355
Light scattering
Electric light scattering study of apomembranes (Taneva et al.) 451
L-Sorbose
The biochemical oxidation of D-sorbitol to L-sorbose at constant electric current (Mitov, Beschkov) 435

Macromolecule
Multiple-pulse electroporation: uptake of a macromolecule by individual cells of *Saccharomyces cerevisiae* (Brown et al.) 235
Melittin
Interaction of alamethicin, melittin and protein kinase C with pure and phospholipid monolayer covered mercury electrode surfaces (Miller et al.) 85
Membrane bound
Electrode reaction of the soluble domain of the membrane-bound hydrogenase from *Desulfovibrio vulgaris*, strain Miyazaki F (Sagara et al.) 191
Membrane electroporation
Membrane electroporation and direct gene transfer (Neumann) 247
Membrane fragments
Orientation of membrane fragments containing $(Na^+ + K^+)$-ATPase (Gergely et al.) 149
Membrane potential
The fluorescent probe method using cyanine dye to determine the membrane potential in cells (Kakutani et al.) 221
Mercury electrode surfaces
Interaction of alamethicin, melittin and protein kinase C with pure and phospholipid monolayer covered mercury electrode surfaces (Miller et al.) 85
Microperoxidases
Bioelectrochemistry of microperoxidases (Razumas et al.) 159
Monolayers
Interaction of alamethicin, melittin and protein kinase C with pure and phospholipid monolayer covered mercury electrode surfaces (Miller et al.) 85
Electroporation of human cultured cells grown in monolayers. Part 3. Transformed cells and primary cells (Kwee et al.) 269
Monoraphidium braunii
Electron transfer reactions in both the oxidizing and reducing sites of photosystem I. A laser flash absorption spectroscopy study (Hervás et al.) 205
Multiple-pulse electroporation
Multiple-pulse electroporation: uptake of a macromolecule by individual cells of *Saccharomyces cerevisiae* (Brown et al.) 235

NAD^+ reduction
Direct electron transfer between *Alcaligenes eutrophus Z-1* hydrogenase and glassy carbon electrodes (Schlereth et al.) 473
Na, K-ATPase
Temperature dependence of electric field effects on Na,K-ATPase (Blank, Soo) 291
Neural networks
On fitting dielectric spectra using artificial neural networks (Kell, Davey) 425
Non-linear behavior
On fitting dielectric spectra using artificial neural networks (Kell, Davey) 425

Omeprazole
Electrochemistry of omeprazole, active metabolites and a bound enzyme model. Possible involvement of electron transfer in anti-ulcer action (Ames, Kovacic) 443
Organisms
The stress-induced electromagnetic emission from biosystems: chemiluminescence response of plants to mechanical and chemical damage (Slawinska et al.) 483
Ovine spongiform encephalopathy
Electroanalytical characterization of Alzheimer's disease and ovine spongiform encephalopathy by repeated cyclic voltammetry

at a capillary graphite paste electrode (Banissi-Sabourdy et al.) 127
Oxygen
The double function of oxygen in bioenergetics (Losada) 31

Photosynthetic bacteria
Proton transport through the *bc* complex of photosynthetic bacteria and the significance of in-situ potentiometry of midpoint potentials (Naumann) 401
Photosystem I
Electron transfer reactions in both the oxidizing and reducing sites of photosystem I. A laser flash absorption spectroscopy study (Hervás et al.) 205
Plant protoplast
The fluorescent probe method using cyanine dye to determine the membrane potential in cells (Kakutani et al.) 221
Polypeptides
Bioelectrochemistry of microperoxidases (Razumas et al.) 159
Polypyrrole membranes
Electrical control of the glutamate dehydrogenase reaction in polypyrrole membranes (Yabuki et al.) 489
Primary cells
Electroporation of human cultured cells grown in monolayers. Part 3. Transformed cells and primary cells (Kwee et al.) 269
Protein kinase C
Interaction of alamethicin, melittin and protein kinase C with pure and phospholipid monolayer covered mercury electrode surfaces (Miller et al.) 85
Proton transport
Proton transport through the *bc* complex of photosynthetic bacteria and the significance of in-situ potentiometry of midpoint potentials (Naumann) 401

Quenched cells
Differential pulse volt bioluminescence of quenched cells of *Lampito mauritii* (Santhanam, Haram) 213

Salivary gland cells
Transcription in *Drosophila melanogaster* salivary gland cells is altered following exposure to low frequency electromagnetic fields: analysis of chromosomes 3L and X (Goodman et al.) 311
Surface oxidation
A comparative study of the surface electrochemical oxidation reactions of α-, β-, and γ-aminobutyric acid at platinum (Wylie, Roscoe) 367

Transcription
Transcription in *Drosophila melanogaster* salivary gland cells is altered following exposure to low frequency electromagnetic fields: analysis of chromosomes 3L and X (Goodman et al.) 311
Changes in transcription in HL-60 cells following exposure to alternating currents from electric fields (Blank et al.) 301
Transformed cells
Electroporation of human cultured cells grown in monolayers. Part 3. Transformed cells and primary cells (Kwee et al.) 269

Ubiquinol cytochrome *c* reductase
Kinetic aspects of the interaction of cytochrome *c* with ubiquinol cytochrome *c* reductase in beef heart submitochondrial particles (Fato et al.) 177

Yeast
Electrostimulation of the dehydrogenase system of yeast by alternating currents (Zhang, Berg) 341
Multiple-pulse electroporation: uptake of a macromolecule by individual cells of *Saccharomyces cerevisiae* (Brown et al.) 235

Zeeman model
From the Langevin–Lorentz to the Zeeman model of electromagnetic effects on ligand–receptor binding (Bianco, Chiabrera) 355
